

## ~ Restylane Silk: Plump Your Pout...and More! ~

*New FDA-Approved Lip Filler Now Available at Contour*

A smile is happiness right under your nose. But what if you're self-conscious about your smile? More specifically, your thinning lips and increasing vertical lines above them? Good news! The makers of the popular Restylane family of products have expanded to include Restylane Silk – the first and only FDA approved injectable specifically designed for subtle lip enhancement and the smoothing of wrinkles and lines around the mouth.

### A Silkier Solution for Lips

Dr. Timothy Jochen has always been very enthusiastic about Restylane and its many benefits. He ranks among the top 10 Restylane injectors in the nation. Restylane itself is a medium sized molecule gel and renowned for being very versatile. Perlane is excellent for addressing deeper lines, such as nasolabial folds. The new Restylane Silk distinguishes itself because it is made of smaller, smoother particles. It is injected into the dermis in tiny amounts with an ultrafine needle designed for improved accuracy in this delicate area.

### Formulated with Hyaluronic Acid

Just like the other products in the Restylane family, Restylane Silk is a clear gel formulation of hyaluronic acid – a sugar that is naturally occurring in your body. Just think – you'll be getting a nearly natural beauty lift with a filler that is similar to your body's own material!

### The Problem Source

The aging process causes fat and collagen reserves in the face to deteriorate which is what leads to those troubling fine lines around the mouth and thinning

lips. Restylane Silk's unique formula provides an opportunity to not only help smooth wrinkles and lines, but also softly restore lip shape and enhance definition without fear of achieving an "overdone" look. Leave the bee-stung look to overly zealous actresses. When injecting the lips, Dr. Jochen says he takes into consideration not only the red part of the lips – the vermilion, but also builds up the light part of the lips – the vermilion border to provide better definition as well as the philtral columns and restores the Cupid's Bow if possible.

### Great Results

In a clinical study involving 221 patients, investigators observed that 77% of patients treated with Restylane Silk showed an improvement in lip fullness eight weeks after treatment and 59% of treated patients maintained it six months after treatment. The percentages reported by the patients themselves in the study soared even higher. Ninety-eight percent of the patients involved reported a visible improvement in lip fullness just 14 days after injection and 76% said they still had it six months following injection. Dr. Jochen also frequently uses Restylane Silk to fill in the under eye tear trough area as well as other facial fine lines with great results. Restylane Silk can also be used for hand rejuvenation to plump up hands.

Contour Dermatology is more than pleased to add Restylane Silk to its powerhouse line-up of dermal fillers. Make plans to incorporate this smooth gel in your battle against the aging process. It will be your secret weapon to restore natural youthful definition and symmetry to your lip and mouth area as indicated following your personal consultation.

## Medi-Weightloss (Continued from page 1)

The crux of the Medi-Weightloss program is protein and vegetables for the first few weeks. Next grains and starches can be added. During the first few weeks, Paige was craving a cheeseburger. No problem. She grilled a 98% lean beef patty, added

some green onions and Laughing Cow® low-cal cheese, a tomato slice and wrapped it in lettuce!

If you've tried diets without success and want the support of a proven, medically-supervised program to guide you to reach your weight loss goals, call (760) 423-4090 to schedule your initial consultation. What do you have to lose?
