

~ Staff Product Pick Brandi Samuels Loves Her Latisse ~

Brandi Samuels, a receptionist and one of the newest members of the Contour Dermatology team, began using Latisse to enhance her eyelashes about a month after she came to work at Contour in December 2014.

"In 30 days you can start seeing results, but in 90 days is when you see distinct results," she said. She

described her lashes before as blond and short. "Now they are getting a darker tint and are much longer and thicker." She's also using the Latisse on

her eyebrows which she used to pay to get tinted. "I don't have to do that now," she said.

"A lot of patients mention how long my lashes look and that initiates a conversation, so I tell them about Latisse and ask if they'd like to try it." She also likes to tell patients about the Power of Three – a 10% discount if people buy three of any product – which with Latisse more than covers you for three months as each box lasts for five weeks. As for side effects, Brandi said, "I've experienced no side effects at all – just results."

Prior to joining Contour Dermatology, Brandi worked in internal medicine for two years. "I really like dermatology," she said. "Contour is a fun environment. The patients are amazing and all the staff works together as a team – not just the front office, but the whole office. We have morning meetings and good communication."

~ It's Cool to Cover Up! - Coolibar Brings Fashion to UPF ~

What if you could infuse a bottle of sunscreen into your clothing for greater sun protection that never washes out? And even better that it were fashionable? Coolibar has finally done it – they've created a fashionable line of UPF 50+ sun protective clothing for men, women and children featuring a variety of items from hats to shirts, shorts and swim suit cover-ups and more - now available at Contour Dermatology.

recommends sun protective clothing as the first line of defense against UVA (aging) and UVB (burning) rays.

Why is sun protective clothing better than regular clothing?

Sun protective clothing is the most effective way to be protected from the sun. It's more reliable than sunscreen application, safer than

a white cotton t-shirt (which has a UPF rating of about 5) and comfortable.

What is up with UPF?

UPF stands for Ultraviolet Protection Factor and is a rating, similar to SPF, that is for fabrics. Coolibar's proprietary fabrics block 98% of the UVA and UVB rays. Coolibar was the first clothing company to receive the seal of recommendation by the Skin Cancer Foundation. The Skin Cancer Foundation

Comfortable cool and machine washable, too!

Coolibar fabrics also help keep you feeling cool. They are highly breathable and moisture wicking. The UPF 50+ rating will not wash or wear out over time. Coolibar clothing can be machine washed and hung to dry or low tumble dry. Hats should be spot cleaned.
